SECURITY AUDIT REPORT

Maison Lysandre · hair salon, Luxembourg

Audit carried out in November 2026 · 6 workstations, 1 till, 1 Wi-Fi network

C

OVERALL LEVEL

Sound basics, three points to fix first.

RESULT BY AREA

Accounts and passwords	To improve
Network and Wi-Fi	Fix quickly
Backups	To improve
Computers and updates	Fair
Email	To improve
Team awareness	Fair

THE THREE PRIORITIES

CRITICAL

Customer Wi-Fi and the till share the same network

Anyone on the free Wi-Fi can see the salon's devices.

→ Set up a separate, isolated guest Wi-Fi. Half a day, no downtime.

HIGH

One shared email password, no two-step verification

A stolen password opens the booking inbox and the invoices.

→ One account per person and two-step verification. One hour.

HIGH

Backups exist but have never been tested

After a failure, nobody knows whether the files would come back.

→ One restore test a month, recorded in a log.

PROPOSED ACTION PLAN

WEEK 1	Separate guest Wi-Fi · two-step verification on email
WEEK 2	One account per person · password manager
MONTH 1	First backup restore test
EVERY MONTH	Check of updates and backups, one-page report

WHAT WE LOOKED AT

→ Router and Wi-Fi settings

→ Email and booking accounts

→ Workstations: updates, antivirus, sessions

→ Backups: location, frequency, restore test

→ Team reflexes facing a fake email (simulated test, with consent)
